Art Unit 112

In reviewing the continuity of the claimed invention it is noted that the patent listed on page 1 (3,314,404) does not disclose the invention. Means for producing shock waves via the use of "a so-called laser" is disclosed for cladding or deforming material, i.e. sheet material. No disclosure is evident for a "chemical reaction" or synthesis. *via absorption of energy for molecular excitation*

The following is a quotation of 35 U.S.C. 103 which forms the basis for all obviousness rejections set forth in this Office action:

*Q 10*  
*Sub 102*  
A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 1-20 are rejected under 35 U.S.C. 103 as being unpatentable over Hopkins, Scheiner or Rich et al.

The references teach chemical reactions conducted with the use of a laser. Making a batch process continuous is a non-patentable procedure and is well within the skill of the art as is other claimed modifications.
